

Tire Outside Paint

## PROMOL TO 6300BK

Aqueous tire outside paint which is applied by spraying onto the green tire to provide compound flow, deaeration and release. A very thin and uniform film is sufficient to achieve these properties. PROMOL TO 6300BK is compatible with most rubber compounds and does not leave residue on the cured tire.

The product offers numerous advantages:

- water based, ready to use
- supports compound flow and deaeration
- strong rubber to rubber adhesion after application and drying
- very good appearance after curing
- very efficient in application, low consumption
